

Sonny Truong

My name is Sonny and I have been working with commercial building owners, property, and facility managers for over 27 years. For the 12 years I've been working as a consultant in fire/life safety and emergency management at a National engineering firm. As a life safety & emergency management consultant I've designed and implemented Emergency Management Programs and Plans, conducted training and exercises for private sector companies, unions and associations. I currently oversee a team of life safety and emergency management professionals that develops plans (emergency management/response plans, business continuity plans, fire safety plans, and emergency evacuation plans), provides training, conduct drills and facilitate emergency exercises.

In 2013 I founded the firm's national emergency management program providing design, development, implementation, and ongoing operational emergency management consulting services for our Clients. From the inception of the program to today, we have grown the firm's emergency management service offerings for organizations located in the Greater Toronto Area and across Canada.

If elected, I would work with the other Directors to promote and grow DRIC. My interest is to foster ongoing relationships with post-secondary institutions that have programs in Disaster and Emergency Management. Create opportunities that allow students to obtain information about DRIC and their future career opportunities in disaster management, business continuity and emergency management, as well as to participate in DRIC sponsored events (i.e. symposium).

Best regards,
H. Sonny Truong, RPA, FMA, SMA, CBCP
